

MDS Managed Meraki Access service

Provide your employees or clients with secure, reliable WiFi access and leave network management to MDS

Connecting an increasing number of wireless devices has become a daily necessity of modern business, but it has been shown that the realization and maintenance of an appropriate infrastructure is not always a simple task. The complexity increases with the number of locations, the number of users and the increase in requirements regarding security, traffic control, analytics, etc. The MDS Managed WLAN service allows you to provide your employees or clients with secure and reliable WiFi access at your locations. The MDS service frees you from the need to configure, monitor and manage the WiFi access infrastructure yourself, by providing you with a complete service. With us, you get a combination of high-quality and reliable network equipment with the experience and expertise required for successful service management.

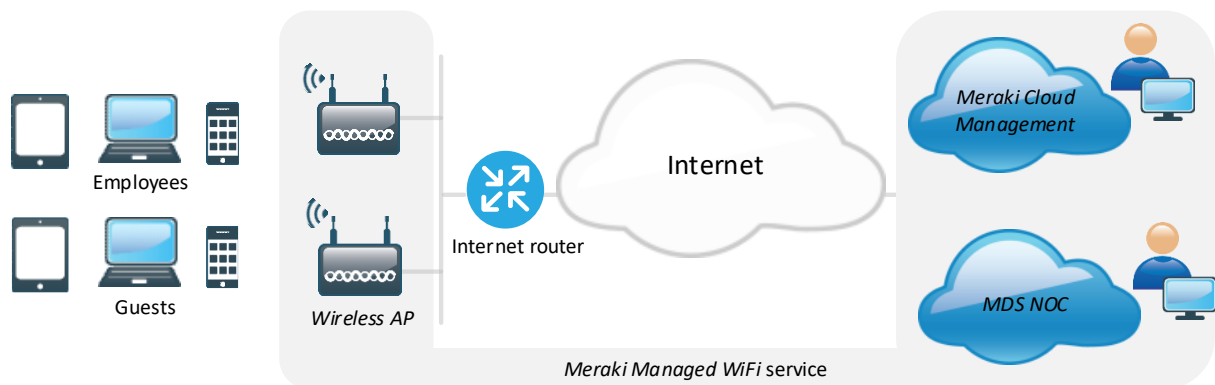

It is necessary that you have Internet access of appropriate capacity at the location. WLAN access equipment may be owned by MDS or owned by you. The equipment is managed from the Cloud, while user traffic is not transmitted through the Cloud, but uses local network access.

Advantages of using the service

- MDS Managed WLAN service allows you to respond to the connectivity requests of wireless devices without having to manage the infrastructure yourself
- Cost reduction through the outsourcing of Wi-Fi access infrastructure management services
- The possibility of renting network equipment
- Eliminating costs for training and organization of technical teams
- Possibility of offering WiFi access to clients and guests with customization and branding of the access website
- Optional - collection of important data about the way the service is used and the user's presence. This data can be used for analytics and creating different service offers.
- Optional - obtaining information about users, their devices and used applications

Why MDS Managed WLAN

- Enabling WLAN access without hassle and in a short time
- Scalability - from small sites to large networks
- Complete transfer of management and maintenance
- Automatic software innovation
- Subscription-based usage - avoiding capital costs
- Superior equipment and state-of-the-art technology
- Cisco Wireless portfolio of devices
